

MICRONET TIME AND ATTENDANCE SYSTEM

Proximity terminal using key-fobs other options available

"Micronet" caters for up to 50 current personnel and stores data on past employees, the system has been designed for its ease of use and user friendly software.

The Micronet system assists companies in speeding up payroll preparation and enables electronic registration of employees and visitors for evacuation reporting etc. and does not require a dedicated PC.

The system comprises of an intelligent stand alone terminal (clocking point) which has a robust cast aluminium front together with a battery back-up as standard that you control simply and effectively from your office PC or workstation using "TimeNet" time management "Windows" based software complete with full reporting features.

COMPATABILITY

Micronet is part of our Timenet series of clocking terminals and can be upgraded at any time to a full Timenet system so it can grow as you do without the need to replace your existing hardware and investment.
